DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Thomas, U.S. Patent No. 5,577,679.

Thomas shows a fishing indicator device including a sensor 270 for sensing retrieval speed of a fishing line 6 onto a fishing reel 1 to produce a signal indicative of the speed of retrieval of the fishing line (see column 3, lines 41-47). A processing means 230 receives the signal from the sensor, calculates the rate of travel of the line, and provides an output signal to display means 240 which displays information about the motion of the line such as amount of line out, rate of line release, direction of reel rotation, or any other pertinent information (see column 4, lines 50-55).

Thomas includes a fishing rod 4 on which the indicator device is mounted, as set forth in claim 2.

Thomas thus discloses all the features set forth in claims 29 and 31, except the limitation that display means 240 receives the output signal indicative of retrieval speed and displays said retrieval speed.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the output signal indicative of retrieval speed to display 240 of Thomas and to display or indicate the line retrieval speed, because Thomas clearly recognizes the rate at which a line is reeled in (retrieval speed) as an important (pertinent) parameter (see column 3, lines 46-47). Thus, Thomas would have suggested to one having ordinary skill in the art the displaying of retrieval speed, since one skilled in the art would consider retrieval speed to be "other pertinent information" as stated in column 4, lines 50-53.

Conclusion

This is a Continuation of applicant's earlier Application No. 09/214,729. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however,

Art Unit: 3654

event will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
